

1 ABSTRACT

2 A rod holder assembly formed from an upper flange member  
3 securable to receiving a socket mounted beneath a gunnel  
4 surface. The upper flange has concealed fastening bosses  
5 located beneath the flange member which are used to engage  
6 fastener that secure a backing plate that is coupled to the  
7 receiving socket. The backing plate can be attached directly  
8 to the lower surface of the gunnel wherein removal of the upper  
9 flange allows for refinishing of the mounting surface and/or  
10 the upper flange, without disturbing the receiving socket  
11 mounted position.
